(57)

A method and system for commanding and controlling diverse home devices on a home network to perform a service is provided. According to the method, a client device that is capable of displaying a user interface is connected to a home network. A software agent is executed on the client device to cause a user interface to be displayed on the client device. First and second home devices connected to the home network are selected from the user interface, and control and command data are sent from the client device to the first and second home devices to cause these devices to communicate with each other to perform the service.
